Career Goal

In this era of globalization and pursuit of material growth, despite having ample achievement people are still unhappy. The world is looking inwards and attempting to understand spirituality and philosophy. There is a limited understanding of Indian Philosophy to mean *Vedanta* (which has evolved from Upanishads). I have worked on Samkhya philosophy and have analyzed the notion of *chitta* according to this philosophy. I would like to pursue this area more and would like to present some glimpse of it to young students to make them realize that Science and Spirituality are related.
